

SOLUTIONS FOR
TODAY'S AND TOMORROW'S
CONTENT.

ViDeus CATALOG

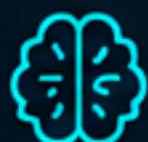

INTELLIGENT MEDIA ASSET MANAGEMENT

ViDeus Catalog transforms large volumes of video, audio, images and documents into AI-enriched, cataloged content that is **searchable** and **ready for production**.

ON-PREMISE

Your data,
always under
your control

BUILT-IN AI

Automatic metadata
and semantic search

MULTILINGUAL

Global content,
without barriers

PRODUCTION-READY

From archive
to editing

YOUR ENTIRE ARCHIVE. NOW YOU CAN ASK IT QUESTIONS.

A COMPLETE WORKFLOW, FROM INGEST TO PRODUCTION.

Entire pipeline integrated in one platform, with AI at every step.

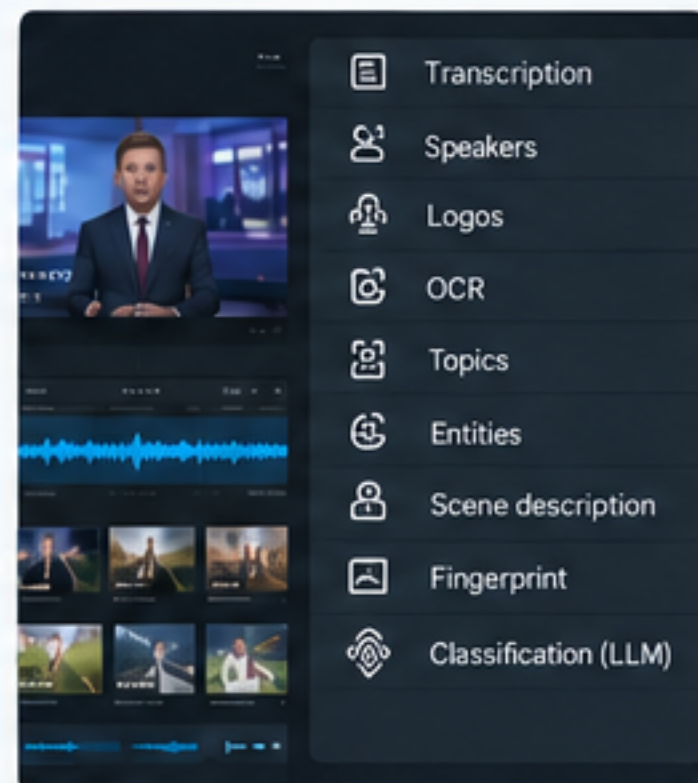

1 CENTRALIZED INGEST

Video, audio, images and documents from multiple sources.

-  LIVE TV
-  RADIO
-  HISTORICAL ARCHIVES
-  HOTFOLDERS
-  TAPES (LTO, Betacam, etc.)
-  DOCUMENTS AND IMAGES

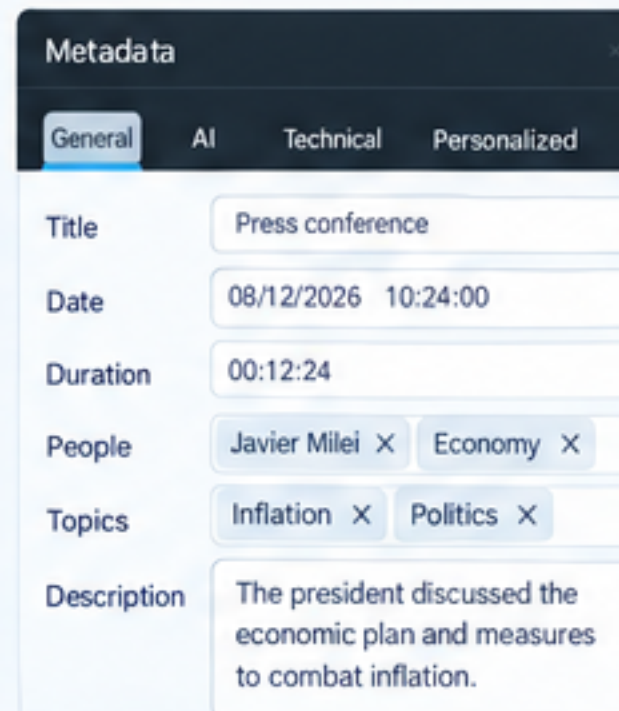

2 AI PROCESSING

Automatic metadata extraction and enrichment.

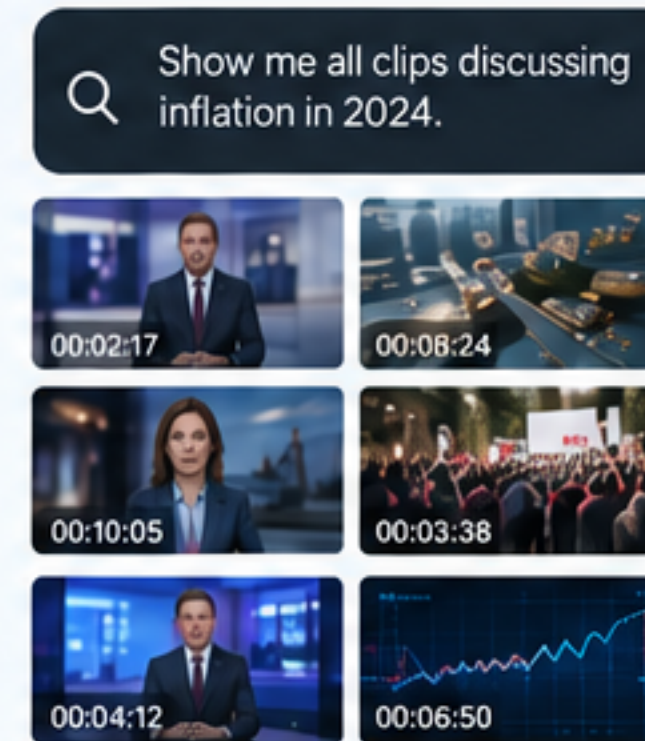

3 CATALOGING AND INDEXING

All information is linked and available for traditional and semantic searches.

4 CONVERSATIONAL SEARCH

Ask in natural language and find exactly what you need.

5 PRODUCTION AND INTEGRATION

Send clips directly to your editing and production tools.

EDITING SYSTEM INTEGRATION

Bring archive content directly into your post-production workflow.

DaVinci Resolve

Adobe
Premiere Pro

Avid
Media Composer

Final Cut Pro

Integrations
and REST API

From archive to timeline in seconds. ViDeus Catalog integrates with leading editing systems, including **DaVinci Resolve**.

AI THAT LISTENS, WATCHES AND UNDERSTANDS **CONTENT**

Analytic engines turn video, audio, images and text into searchable metadata, making your archive smarter and reusable.

FACES

Automatic person detection in TV, streaming and historical archives. Recognition and grouping.

SPEAKERS

Identify who is speaking on radio and television. Speaker diarization and labeling.

SPEECH-TO-TEXT

Automatic timecoded transcription in multiple languages.

LOGOS

Automatic detection of brands, logos and graphic elements on screen.

OCR

Index lower thirds, banners, signs and any visible on-screen text.

LLM

Identify and classify topics, entities and sentiment in context.

VLM

Automatically describe scenes, objects, actions and context using vision-language models.

FINGERPRINT

Automatically detect ads, repeated content (content match) and clips of interest.

**FROM METADATA
TO KNOWLEDGE**

These engines link what was said, who said it, what appeared on screen and what was happening in the scene, automatically enriching your archive.

HIGH ACCURACY

Local, customizable models.

MULTILINGUAL

Global content without barriers.

SAVE TIME

Automate manual cataloging tasks.

SEARCH BY MEANING, NOT JUST WORDS.

Conversational search and vector indexing help you find exact content in seconds, regardless of filename, folder or date.

Show me Laura Torres's statements about education during 2024.

TOTAL CONTROL

Your content, your infrastructure. Data and AI models run on your own servers.

PREDICTABLE COSTS

No surprise bandwidth or cloud processing charges.

INTEGRATED PIPELINE

Ingest, processing, indexing and retrieval in one platform.

MULTILINGUAL

Support for content in different languages.

INTEGRATIONS

REST API, MCP and third-party system connections.

PRODUCTION-READY

Send clips directly to editing tools, including DaVinci Resolve and other professional tools.

ANALYTICS AND REPORTS

AI-generated metadata can also be used to analyze entities, categories, sentiment and trends in your content.

- Education
- Politics
- Society
- Economy
- International
- Culture
- Other
